SUMMARY

Results-driven Software Engineer with 4+ years of experience architecting full-stack solutions. Expertise in Python, Go backend development, and React/TypeScript frontend. Seeking a Software Engineering role to build innovative solutions.

EXPERIENCE

Hardware Specialist & Small Business Owner

Self-Employed

June 2022 - October 2024, Oceanside, CA

- Engineered and fabricated over 100 custom-tuned competitive gaming controllers, earning an average **5/5 rating across 76 customer reviews**.
- Developed and implemented **intricate modification protocols** to enable advanced features (e.g., stick-profile tuning and button remapping) on custom hardware, **demonstrating complex system integration**.
- Optimized device hardware via precision shell modifications to **achieve specific input values out of a total of 352 values** - critical for high-level competitive play.

PROJECT

Devlog

[devlog.ntpotraz.dev/](#) · October 2025 - Present

- Architected a **high-speed backend** (Golang/SQLite/Turso) to enable instantaneous create, edit, and retrieval of log entries. **Sub 1 second** database reads and writes.
- Implemented **CI/CD using GitHub Actions and Docker** to automate building and deploying to Google Cloud Run when a new feature gets merged to main.
- Integrated Clerk for user authorization, supporting SSO (GitHub/Google) and email/password login, **scalable from 1,000s of users to 1,000,000s**.

Pacific Islander Community Health App (Capstone Project)

[ntpotraz.github.io/PIC-Health-App/](#) · August 2024 - December 2024

- Led a **5-developer team** to architect and implement the core UI/UX for a cross-platform community resource hub.
- Served as Technical Liaison between developers and non-technical stakeholders, translating requirements into clear development tasks and sprint goals **leading to a 5x increase to productivity**.
- Engineered a **database-less backend** via Google Calendar API and Forms, **reducing infrastructure complexity and storage cost to \$0**, and enabling seamless client event management.

Gloomhaven Monster Tracker

[ntpotraz.github.io/gloomy-monsters/](#) · March 2023 - October 2024

- Developed a React web application to digitize monster tracking for Gloomhaven, improving gameplay and **decreasing setup time by 100s of hours total** in a campaign.
- Built a dynamic React interface that calculates and displays monster stats and used JSON for instant retrieval and real-time updates allowing monster lookup to be **in seconds rather than minutes**.
- Implemented interactive UI elements to track health changes and status effects, eliminating cumbersome physical tokens for multiple monsters **increasing table space by 20%**, vital for table top games.

EDUCATION

B.S in Computer Science

Cal State San Marcos · San Marcos, CA · 2024 · 3.7

- Relevant Coursework: OOP, Data Structures & Algorithms, Networking, Cloud, Web Programming, Databases, AGILE/SCRUM.

SKILLS

Languages: Go, JavaScript/TypeScript, React, Python, SQL

Tools: Git, GitHub, Linux, Agile/SCRUM, AWS, GCP, Docker, CI/CD
