SUMMARY

Results-driven Software Developer (B.S. Computer Science, 3.7 GPA) with demonstrated success leading projects and architecting full-stack solutions. Strong in Python/Golang backend and React frontend. Seeking a Software Engineering role to build innovative solutions.

WORK EXPERIENCE

Hardware Specialist & Small Business Owner | Self-Employed

Engineered and fabricated over 100 custom-tuned competitive gaming controllers, earning an average 5/5 rating across 76 customer reviews.

- Executed **intricate hardware modifications** (desoldering/soldering on custom PCBs) to enable advanced features like stick-profile tuning and button remapping.
- **Delivered exceptional customer service and technical support**, managing all aspects of the business from component sourcing to quality assurance.
- **Optimized device hardware via precision** shell modifications to achieve specific input values critical for high-level competitive play.

PROJECTS

Team Lead & Lead Developer (Capstone Project) | React Native

San Marcos, CA

Led a 5-developer team to architect and implement the core UI/UX for a cross-platform community resource hub.

- Served as **Technical Liaison** between developers and non-technical stakeholders, translating requirements into clear development tasks and sprint goals.
- Engineered a **database-less backend** via Google Calendar API and Forms, reducing infrastructure complexity and enabling seamless client event management.

Gloomhaven Monster Tracker | React

Developed a React web application to digitize monster tracking for Gloomhaven, improving gameplay and setup.

- Built a **dynamic React interface** that calculates and displays monster stats and used custom JSON for instant retrieval and real-time updates.
- Implemented interactive UI elements to track health changes and status effects, **eliminating cumbersome physical tokens** for multiple monsters.

Dungeons and Dragon 5e Character Creator | Java

Co-developed an OOP backend for a Dungeons & Dragons character creator during a collaborative software engineering course.

- **Engineered an expandable, object-oriented inventory system**, enabling the easy addition of new items without modifying core code.
- **Designed and implemented a stateful dice rolling system** that accurately mimics real-life rolls and allows users to **assign, track, and undo stat allocations**.

EDUCATION

Cal State San Marcos | B.S in Computer Science, Cum Laude Honors, 3.7 GPA

San Marcos, CA

Relevant Coursework: OOP, Data Structures & Algorithms, Networking, Cloud, Web Programming, Databases, AGILE/SCRUM

TECHNICAL SKILLS

Languages: Python, Golang, React, SQL | **Tools:** Git, GitHub, Linux, Docker, CI/CD
